Mellanox Technologies is a leading supplier of end-to-end Ethernet and InfiniBand intelligent interconnect solutions and services for servers, storage, and hyper-converged infrastructure. Mellanox intelligent interconnect solutions increase data center efficiency by providing the highest throughput and lowest latency, delivering data faster to applications and unlocking system performance. Mellanox offers a choice of high performance solutions that accelerate application runtime and maximize business results for a wide range of markets.

**FW PHY Verification Student**

Mellanox Technologies is looking for talented Firmware Student to take part in developing the 200GbE Data Centers and Networks of tomorrow.

Develop Mellanox next generation network products firmware.

Take part in advanced networking Firmware features development for Cloud and Data center. Focusing on Physical Link up process and optimizations.

Collaboration with leading Network companies which are our customers.

Good knowledge of standard specs (Ethernet, MAC, InfiniBand, Physical Layers, Optics.

**Qualifications:**

Student for Education: B.Sc. degree in Electrical Engineering or Computer Engineering.

**Experience/ Requirements:**

» 0-2 years of experience
» Programming Knowledge in C
» Knowledge of real-time SW

**Chip Design Student\Engineer**

Mellanox Technologies is looking for an Electrical Engineer\Student to join the Chip Design group at Tel Aviv.

Mellanox Technologies is an incubator for talent.

We are a strong believer in developing our employees and giving them the tools to succeed.

We are a fast-growing company with positive energy that emanates from our team members' internal drive to develop, market, sell, and support cutting-edge products and services.

At Mellanox each individual contributes to the success of our company.

If you are looking for a rewarding career, talented colleagues, and a great environment in which to challenge yourself, grow, and lead, Mellanox is the right place for you!

**Qualifications:**

» Studying for a B.SC. in Electrical Engineering
» knowledge in HDL (Verilog/VHDL)- advantage
» High Level English
**Backend Engineer**
Mellanox is looking for an experienced Backend Engineer to join the Backend team. The position includes the following responsibilities:

» RTL to GDS full flow (synthesis, Place & Route)
» Signoff flows (Timing signoff, DRC & LVS signoff)
» Post – silicon correlation and characterization

The job require close and interactive work with other groups such as chip design, production testing and more.

Working on the most advanced technologies, Mellanox backend team has been confronting interesting and complex challenges, and has taped-out many devices with unmatched quality and great success.

**Qualifications:**

» Education: B.Sc. in Electrical Engineering
» Previous experience - advantage
» Personal: Team player, ability to lead, quick learner, proactive, highly motivated and committed.

**אשת קשר:**
מיכל לוביץ' - מגייסת
michallu@mellanox.com
Computer science/engineering - student position

Responsibility:
» Develop software utilities and test tools
» Modify existing software
» Build comprehensive datasets for machine learning activities.
» Focus on NLP

Requirements:
» Working at least 3 days a week
» Computer science/engineering, 3rd/4th year
» Good familiarity with a programming language such as Java and Python
» Grade 85 onwards

Advantages:
» ML / Data analytics experience or academic course
» Experience or academic course in Natural Language Processing

Analog group student
Toga’s Analog group is looking for a talented electrical engineering student to join the most advanced project in the communication field.

Skills:
» 4th year B.Sc. student, or M.Sc. student (Preferred) in Electrical Engineering
» Basic knowledge of Linear circuits and Cadence environment – A must
» At least 2 working days in a week

HR Business Partner - רחל פרץ
jobs@toganetworks.com
We are TandemG, an end-to-end multi-disciplinary Software and Hardware R&D center, delivering tailor-made solutions & state-of-the-art infrastructure to companies of all sizes, from startups to global corporations

**Junior C++ developer**
We are looking for an exceptional university graduate, born to develop system, to join one of our development teams.
At TandemG, you shall take part in the development of state-of-the-art and innovative products with cutting-edge technologies.
The main challenge in this position will be to quickly and thoroughly understand new technologies and systems.

**Responsibilities:**
» Understanding the product/system requirements.
» Integrating state-of-the-art and innovative solutions.
» Architecture and design of the solution.
» Developing the solution in C/C++.
» Testing and integration.

**Must have:**
» BSc in Computer Science or equivalent.
» Good knowledge of C/C++.
» Good knowledge of operating systems concepts.

**Send your CV to:** TandemG.66.319@applynow.io

**Junior RT Embedded developer**
Tandem Group is looking for an exceptional university graduate, born to develop system, to join one of our development teams.
At TandemG, you shall take part in the development of state-of-the-art and innovative products with cutting-edge technologies.
The main challenge in this position will be to quickly and thoroughly understand new technologies and systems.

**Responsibilities:**
» Understanding the product/system requirements.
» Integrating state-of-the-art and innovative solutions.
» Architecture and design of the solution.
» Developing the solution in C/C++.
» Testing and integration.

**Requirements**
Must have:
» BSc in Computer Science or equivalent.
» Good knowledge of C/C++.
» Good knowledge of operating systems concepts.

**Send your CV to:** TandemG.D3.D0E@applynow.io
Junior C++ Developer
A financially stable company developing an AI-based telecommunication solution is looking for a Junior C++ Developer who will research and develop techniques to realize and accelerate Machine Learning and Deep Learning algorithms. The offices are in Herzliya.

דרישות:
» B.Sc./M.Sc. in Engineering/Computer Science or related technical field from a leading university.
» Graduates with 85 GPA may be considered without any experience.
» Strong knowledge of C/C++.
» Strong mathematical fundamentals.
» Knowledge of Python.
» Good communication and organization skills, with a logical approach to problem-solving, good time management, and task prioritization skills.

Junior Big Data Developer
A well-funded Big Data company in the field of online advertising is seeking a Junior/Graduate Developer to join the Big Data development team and take part in the development of the next generation of its flagship product. The offices are in the Central District.

דרישות:
» Graduate in Computer Science/Computer Engineering/similar degree (or last year student).
» Knowledge and experience (studies, projects, etc.) with Python/Java.
» Excellence and huge motivation to learn and develop complex solutions.
» Knowledge and/or experience with Spark.
» A can-do attitude and make it happen approach.
» Passion for technology.
» Excellent written and verbal communication skills, in Hebrew and English.

As the global leader in delivering high capacity Broadband Wireless Access, we develop cutting-edge technological solutions that use advanced SW tools.

Incorporating cutting-edge technologies, RADWIN's solutions are equipped with powerful OSS tools that optimize network planning and rollout. Deployed in over 170 countries, RADWIN's solutions are preferred choice of Tier-1 service providers, public and private enterprises, power and mining companies as well as rail and metro transport authorities.

Join us and work on new solutions being developed in collaboration with major industry players such as Facebook and Microsoft.

We believe that people are our greatest asset.
Join us and be part of a team that values your opinion and is open to new initiatives.
We're currently searching for people who are curious, innovative, team-players and dedicated to truly creating a difference.

**Junior Fullstack Developer** (ref. 689)
Tel Aviv, Israel

Reports to: Radwin Web Service Team Lead

We are looking for a talented junior full-stack developer to join our next generation cloud-based applications team.
We are using cutting edge technologies, such as Angular, NodeJS, Ionic, MongoDB, Kubernetes etc and following modern developer methodologies such as automated CICD pipeline, peer CR, Agile, and Automated testing etc.
If you have a proactive approach and you are enthusiastic about learning and conquering new challenges, join our team and enjoy our innovative project.

**Position Requirements:**

» A student in the process of studying a degree in the fields of Software Engineering or Computer Sciences, GPA 85+.
» Must have at least one year left on the degree.
» Must be able to work at least three days a week; hours are flexible.
» Self-learning ability
» Enthusiastic about complicated technical challenges
» Team player
» Ability to work in a highly dynamic environment while meeting deadlines
» Proactive approach
Junior Software Engineer (ref.695)
Tel Aviv, Israel
Report to: ODU Team Leader

We are looking for a talented software engineer. The desired candidate should be an independent learner, curious about technology and think outside the box. He/She will work as part of a small, elite, fast-moving team to meet aggressive schedules.

Position Requirements:
» Bachelor’s degree in the fields of Software Engineering or Computer Sciences,
» Self-learning ability
» Enthusiastic about complicated technical challenges
» Team player
» Ability to work in a highly dynamic environment while meeting deadlines
» Proactive approach

Check Point
SOFTWARE TECHNOLOGIES LTD

Check Point Software Technologies Ltd. (www.checkpoint.com) is a leading provider of cyber security solutions to governments and corporate enterprises globally. Check Point’s solutions protect customers from 5th generation cyber-attacks with an industry leading catch rate of malware, ransomware and advanced targeted threats. Check Point offers a multilevel security architecture, “Infinity Total Protection with Gen V advanced threat prevention”, this combined product architecture defends an enterprises’ cloud, network and mobile devices. Check Point provides the most comprehensive and intuitive one point of control security management system. Check Point protects over 100,000 organizations of all sizes.

Innovation Junior Software Developer:
A new security product group within check point is looking for the developers who wish to grow and develop next generation security products. We are looking for a talented, passionate and highly motivated software developer to join the effort of developing layer 7 security solutions.

Student C/C++ Software Developer:
The team consists of masters in their field and is responsible for cutting edge research, prototyping and creation of the foundation for next generation products. The core team has significant influence with a lot of personal growth opportunities, and you will be exposed to the latest technologies in use today, as well as highly experienced technology leaders to learn from.
Over 11,000 companies in 100+ countries trust our #1 customer experience platform to drive great business outcomes. Combining the best of technology and human ingenuity, we build solutions that mirror natural communication and work the way you think.

The Genesys Israeli R&D center embraces a startup mindset in a big corporation, enabling a work environment rich in office culture, visibility and personal ownership. The advantages of a small group within a well-established company, promotes critical questioning, innovation and continuous progress.

**Position #1: Software Engineer - Full Stack**

The Full Stack Software Engineer position requires an individual with a strong computer science background to join our development team. In this role, you will be part of a development team that designs and develops features and modules for our high performance, data intensive cloud solutions.

You will work in a fast-paced, start-up culture, where our environment is one of continuous change, innovation and experimentation. You will work with established and cutting-edge technologies like Java, Kafka, Redis, JavaScript, and various AWS Services to build on our micro-service Cloud architecture.

**Key Responsibilities**

» Design new software features through agile development practices such as chartering, story boarding, and regular stand-up meetings.
» Implement new features, work with support services to fix any issues found in the field and monitor platform components.
» Write unit and integration tests.
» See features through deployment into production.
» Participate in source code pull requests as a reviewer and author, staying open to constructive comments.
» Recommend new technologies as components of a solution when appropriate

**Minimum Requirements**

» Bachelor’s degree in Computer Science (Mandatory).
» Excellent knowledge of object-oriented concepts and design.
» Experience working with JavaScript frameworks such as Angular/React/Vue.JS

**The ideal candidate would also have experience with:**

» Amazon Web Services (Dynamo, S3, Lambda, SQS, SNS, etc.)
» Typescript
» Jenkins, Sumo, New Relic, or other deployment tools
» React/Redux
» Git
» Jenkins
» Node
» TDD (test-driven development).

We are looking for excellent people who are team players with excellent verbal and written communication skills in English. The work is challenging, creative and fast paced.
Position #2: Computer Science Student
We are looking for a computer software engineering student to join our team. In this role you will design and develop features for our high performance, data intensive, scalable enterprise-class solution. This position is a part time position (50%).

Responsibilities:
» Designing and developing features and modules for our high performance, data intensive, scalable enterprise-class solution using state of the art industry techniques
» Guiding QA team in developing test plans/cases and automated functional testing to ensure outstanding solution quality

Requirements:
» Outstanding Computer Science Student in their 3rd or 4th year.
» Excellent knowledge of object-oriented concepts and design
» Solid understanding of the full web technology stack (for example, HTTP, cookies, REST, JSON, Ajax, ASP.NET) is a plus
» Able to work independently.

Position #3: Software Engineer In Test (SET)
We are looking for a Software Engineer in Test (SET) which will design, develop and manage automation testing and performance testing to ensure the outstanding quality of a new generation of world-class cloud applications.
SETs work independently on features to assess the scope of testing, implement automated system-level tests, and maintain a CI pipeline by triaging and optimizing tests. Together with developers, you will work in a highly collaborative environment to create world class products in new and existing cloud-based product suite. Good SETs have a strong understanding of their development team's processes, priorities, roadmap, and current feature work

Key Responsibilities
» Work closely with the software development team during the product design phase.
» Define clear test plans that cover all use cases and scenarios.
» Develop and execute automated and manual tests.
» Triage failed automated test executions and report defects when appropriate.
» Maintain automated test jobs in an automated deployment pipeline.
» Coordinate bug hunts to gather user feedback for new features.
» Identify useful test cases that identify and isolate faults.
» Build trust and maintain relationships with team members of product management and development.
» Participate in design and code reviews to help mentor other team members and to influence technical direction of testing department.
» Perform exploratory testing to identify high risk areas, refine requirements, and isolate bugs to increase testability of application.
» Coordinate test efforts for projects involving multiple teams to ensure appropriate test coverage.
» Contribute robust, well architected solutions to the shared test framework.
Minimum Requirements

» A Bachelor of Science degree in Computer Science or related degree or equivalent in work.
» Knowledge of automated processes to deploy, manage, configure and scale our application in Amazon cloud (AWS) environments.
» Experience with OOP programming languages such as Java.
» Knowledge of multi-tier web applications and technologies such as HTTP, JavaScript, and JSON in a service-oriented architecture (SOA)
» Possess the ability to work independently.
» Good communication skills and experience working within a multi-culture team.
» Quick learner with excellent problem-solving skills.
» Knowledge of agile testing methodologies and best practices for continuous delivery (CD)

Experience with any of the following is a plus:

» Linux OS
» Test tools such as: Selenium or JMeter.
» Python or other shell scripting languages.
» Performance and load testing for enterprise applications is a big plus.

We are looking for excellent people who are team players with excellent verbal and written communication skills in English. The work is challenging, creative and fast paced.

For all positions resumes should be sent to jobs-il@genesys.com
**Student Position**

**Job Description:**
In this position, you will be responsible for:
» Execution and development of tools to analyze neural networks behavior to improve our AI products
» Development of product's simulators
» Working closely with the application developers
» The work environment involves C/C++/Python/DSPs

**Requirements:**
» BSc / MSc Student in Computer Science / Computer Engineering from a leading university.
» GPA 85 and up, minimum 4 semesters before graduation.
» Knowledge in digital logic systems
» Knowledge of C/C++.
» Experience with Image Processing /Computer vision- advantage
» Knowledge of Python scripting- advantage
» Ability to work 20-25 weekly hours

**Testing Intern**

**Minimum qualifications:**
» At least one year to graduate Electrical Engineering degree
» An understanding of wireless system architecture and products.
» Hard worker, curious and creative
» Strong technical, planning, and communication skills.
» Quick in learning and willing to take up challenges.

**Preferred qualifications:**
» Familiarity with test equipment development.
» Familiarity with automation systems tools.
» Familiarity with LTE\5G Technologies, especially PHY layer.
» Major in Communication.
» Knowledge of scripting languages.
» Familiarity with standard testing equipment (traffic generators, VSA, Signal generator etc.).

**C++ developer- student position**

**Requirements:**
» BSc / MSc Student in Computer Science / Computer Engineering from a leading university/ College.
» Minimum 2 semesters before graduation.
» Knowledge of C++.
» Previous experience as a developer- advantage.
» Ability to work 20-25 weekly hours.

Anshi Tzovitov Techline by INTURON.

The position of Sales Support at INTURON.

By email: keran.bar-lev@utron-parking.com

Job Description:

Ensuring customer service in the field in the company INTURON, answering email and telephone (in the field), Pre/Post Sale

The position includes: technical support and assistance in sales processes, control and correction of problems, and service and support at home and abroad. The training includes passing presentations and learning in the software environment of the systems.

Requirements:

Bachelor of Science in Electrical Engineering /Electronics/Control - Mandatory

Experience in the field of control and automation or programming language - Advantage

High level of English - Mandatory

Availability for multiple flights abroad

Engineers/Engineers in the company INTURON.

The position includes: development solutions for control systems of multi-disciplinary, operations, service and support.

Requirements:

Bachelor of Science in Computer Science/Software/ Electronics/Electricity – Mandatory

Experience in the field of control and automation or programming language – Advantage

HMI and PLC systems

Experience in software controlled systems

Availability for multiple flights abroad (mainly to the USA)

Willing to work in a mixed office and field.

Electrical Engineer at INTURON.

Location: Tel Aviv. The position includes: engineering design of projects, implementation of projects, work with subcontractors and teams, coordination in the field and more. Location: Tel Aviv.

Requirements:

Graduate Bachelor of Science in Mechanical Engineering or Building Science

One to two years of engineering experience in any field

Revit and/or Autocad control of software

English level high - Mandatory

Business Processes Student

In one sentence
Orbotech is looking for a Business Processes Student to join the OPEX team. Join us and be part of driving the LEAN journey in Orbotech operations toward a continuous improvement culture and be responsible for operations business processes and performance management.

What your job will look like
Design & customization of data collection and integration tools, dashboards & reporting tools to support decision making, business processes improvement and standardization
Define KPI’s, measurements and tools to support operations' business units goals
Project management – support related projects
Work in a cross-functional environment with multiple organizations (local and global)

What you will need to succeed
» B.Sc. student in Industrial Engineering with at least 2 years until graduation
» Proficiency in MS Office applications like Excel, Power-point, Word and SharePoint
» Great analytical skills
» Autodidact person, with excellent communication capabilities and a great team player
» Multi-tasking and the ability to work with several disciplines in parallel
» High level of English

Software Student

What Will Your Job Look Like?
» Implement SW in Python and C++ for product requirements and features
» Performing code maintenance, testing, and analysis.
» Corresponding with other teams.
» Providing customer support.
» Working with quality assurance teams.

What Do You Need to Succeed?
» A student in the field of Computer Sciences/Software Engineering from an acknowledged university with a grade point average of at least 80
» Experience with C/C++ - an advantage
» Experience with Python – an advantage
» Ability to multi-task in a multi-requirement environment
» Good English communication skills
**Application Student**

**What Will Your Job Look Like?**
» Testing new R&D features and versions before sending to field. Drafting Software release documents.
» Operating and performing applicative tests on systems. Working together with experts in various disciplines, including Software, Algorithm, Mechanics, Physics & Electronics
» Defining customer needs from the system
» Drafting application specifications and definitions of new system features for R&D
» Supporting technical experts abroad

**What Do You Need to Succeed?**
» 1st or 2nd degree student in Electrical engineering / Mechanics / Physics / Mathematics / Materials, with 2 years left before graduation, from an acknowledged university
» An average grade of 85 and above
» English – good writing and verbal skills
» Good system understanding and technical affiliation
» Strong interpersonal skills, ability and willingness to work in teams
» The jobs include traveling abroad to customer sites

**Algorithms Developer Student**

**In one sentence**
Orbotech is looking for a talented Algorithms Developer Student to join our top-talented algorithm team. The position offers an opportunity to develop solutions to challenging algorithmic problems in the field of image processing and machine vision. Our matrix-based environment is a dynamic and fast pace one and involves working with a global environment.

**What your job will look like**
Development of algorithm solutions in the fields of image processing and machine vision for state of the art opto-mechanical systems.
Design, implementation and integration into current and future product generations
Maintaining, testing and analyzing existing algorithmic components
Building simulation and visualization tools

**What you will need to succeed**
» M.Sc. / Ph.D. student in exact sciences (Computer Sciences, Computer Engineering, Electrical/Electro-Optical Engineering, Applied Mathematics, Bio-informatics or Physics) from an acknowledged university
» Minimum grade point average above 85
» Experience (professional / thesis) in machine learning, machine vision or image processing – advantage
» Fluent in C/C++ for Windows/Linux, Python - advantage
» Ability to work in a team
» Ability to multi-task in a dynamic environment
» Ability to quickly comprehend and maintain code
» Personal skills: communication, independent learning, creativity
» Fluent in English (spoken and written)

CV to jobs@orbotech.com
At Samsung we are focusing beyond the horizon and pushing exciting developments in many key areas of technology. Samsung is creating a new area of continuous innovation, bringing value and contribution to society and creating a workplace where our employees can enjoy making the most of their talent, creativity and passion. join our fascinating journey to create unrivalled products based on the company’s cutting-edge technology and share our commitment to bring new value to people around the globe.

**Verification Engineer**
Samsung Israel R&D Center is looking for talented Electrical Engineers who wants to learn and specialize as Digital Verification Engineers in the Automotive filed. If you are Electrical Engineering graduate with average of 85 and above we will be happy to meet you.

samsung.digitalverificationengineer@applynow.io

**ISP & CV Algorithm Student**
Samsung Semiconductor Israel’s ISP and CV team is responsible for developing and productizing highly challenging, cutting edge, computer vision (CV) and image signal processing (ISP) products for Samsung’s next generation products for the emerging automotive market.

samsung.ispcvalgorithmstudent@applynow.io

**Computer Vision Algorithm Student**
Samsung Semiconductor Israel’s Computer vision team is looking for highly talented student that wants to learn and specialize in deep neural network, computer vision and machine learning domains and to make a significant impact on products that reach millions of users around the world. If you are an Electrical Engineering/ Computer Science M.Sc. student with 90 average we will be happy to meet you.

samsung.compcvalgorithmsstudent@applynow.io
Our mission is creating a workplace environment of transparency, ownership, and accountability, to empower managers and their teams.

The idea? Create a team management solution to connect people to workplace processes, for companies of all sizes, across any industry. But don’t just make a tool that works, make a tool that people love to use. Today, monday.com is the go-to workplace tool for more than 70,000 teams around the world who are now more engaged, more collaborative, and more on top of their work than ever before.

Can’t wait until graduation to start your career? monday.com is looking for you!

monday.com was founded on the belief that transparency and collaboration create a culture of ownership and empowerment; more empowered employees are more productive employees. And we’re only scratching the surface of what we can accomplish together.

We are all about creating a workplace environment of transparency, ownership, and accountability, to empower managers and their teams.

We're looking for talented students to join our rapidly growing R&D team. This is an amazing opportunity to join one of Israel's fastest growing startups and make an immediate and real impact on the future of our product. Our Developers aren't just executors of code; they're brilliant end-to-end thinkers who are incredibly independent and self-managed. This is the kind of environment where initiative is rewarded, and the sky is the limit in terms of what you can accomplish.

**Requirements**

- Computer Science/ Computer Engineering student
- GPA 85 and above (Please include a copy of your transcript with official grades with your CV)
- Available for 2-3 work days per week

Deloitte

Deloitte in Israel provides services of audit, tax, advisory and management consulting in the fields of strategy, operations, technology and human capital. We serve our clients of all sizes, in all sectors of the economy. Our advisory network is the largest and most diverse in Israel and includes over 400 consultants.

In all of the countries in which we operate, we work according to international methods and standards, enabling us to work closely with over 150 of the world’s leading experts. We provide our clients with a comprehensive network, uniform work methods and broad professional knowledge. For years, our best employees have helped managers in various organizations to deal with the most significant business challenges, creating value for the organization and protecting it from risks.

Our goal is to make a significant impact on our clients, on our people, and on our community.

Our values

Ethics, integrity, quality, professional behavior, confidentiality, pride

Our promise

We help our clients succeed through end-to-end solutions to complex needs. The solutions are based on the most relevant and professional solutions in Israel, business connections and personal connections, and the world-leading services of Deloitte.

Our mission

"We continue to focus on our clients and creating significant value for them, through the integration of multidisciplinary skills, professionalism and high quality, while we operate in light of our ethics and values."

Deloitte

Bloomberg unleashes the power of information and technology to bring clarity to a complex world. Global customers rely on us to deliver accurate, real-time business and market-moving information that helps them make critical financial decisions. In a career at Bloomberg, you'll play a vital role in making it happen.

Software Engineer - Student Position

Every day, trillions of dollars pass through the Bloomberg Terminal. As a result, hundreds of thousands of financial professionals rely on our 500 enterprise applications to manage their portfolios, execute their trades and analyse the markets. We're the engineers and architects behind the world's number one source for real-time and historical financial market data and analytics. Communications platforms. Data analytics. Trading platforms. News and information. We deliver all of this and more through our software, digital platforms, mobile apps and hardware. We're now looking for university students to join our team of highly talented software engineers in Tel Aviv.

What's in it for you?

We are deeply proud of our diverse and open culture, and value diversity of thought and perspective in every form. Working with us, you will have the opportunity to lead on projects under the mentorship of full-time software engineers. You'll become an expert on the Bloomberg Terminal and will gain a deeper understanding of technology and finance. In addition to your projects, you'll participate in social and philanthropy events with your colleagues. We'll also give you the flexibility to balance your work with us alongside your studies. During term time, you'll aim to work approximately 25 hours a week and can flex up to full time when you don't have classes.

We'll trust you to:

» Take ownership of projects under the guidance of your mentor
» Be a collaborative member of your team
» Have a deep understanding of data structures and algorithms
» Be an excellent problem solver

You’ll need to:

» Have programming experience in C, C++, Java or Python
» Have work authorisation to work in Israel
» Be working towards a degree in Computer Science
» Be passionate about technology and have an eagerness to learn in our high energy, fast-paced environment

If this sounds like you, please apply below!

careers.bloomberg.com/job/detail/79291

We want people who see things differently, find solutions and collaborate instinctively. Race, religion, sex, nationality, and other labels have nothing to do with it. If you have a disability and you need help with our application process, please email us at access2@bloomberg.net.

Moovit is a leading Mobility as a Service (MaaS) company and the maker of the world's most popular urban mobility app. The Moovit free app for Android, iOS and the web guides people get around cities effectively & conveniently, using any mode of transport. Introduced in 2011 it now serves over 620M users in more than 3,000 cities across 94 countries.

For governments, cities and transit agencies, Moovit offers AI-powered MaaS solutions covering operations and analytics, with proven value in reducing congestion, growing ridership, and increasing efficiency and asset utilization. Moovit’s advanced technology platform runs the world’s largest repository of transit & mobility data. Hundreds of cities, transit agencies, and mega events repeatedly choose Moovit to address their mobility challenges and increase their level of service to citizens and visitors. They were joined by Industry leaders such as Microsoft and Uber who have partnered with Moovit to power their mobility offerings.

Integration Junior Developer

The Role:
We are growing and looking for a talented and enthusiastic team player to join our amazing team. If you’re excited to be part of a winning team, Moovit is a great place to grow your career.

Responsibilities:
As an Integration developer, you will be responsible for implementing a complex integration of transit data into our systems.
You will be responsible through the entire integration life-cycle: understand the requirements, development, testing, and deployment.
You will work closely with our Operations department - gather requirements, provide support and suggest solutions for technical problems.

Requirements:
» B.Sc. in computer science/software Eng.
» 1+ years in Java development.
» Excellent understanding of OOP.
» Able to work independently and as a team member.
» Proactive, driven, detail-oriented individual.
» Strong sense of ownership, and initiative to fix problems and optimize systems that are both inside and outside your area of responsibility.

For application send your CV to: moovit.juniordev@applynow.io
DATA SCIENTIST:

Playstudios-IL is anything but a standard games company, in fact - it’s not like any other company you’ve seen before. Sure, we do build an incredibly entertaining game experiences, and yes, you will see game designers, animators and tech ninjas walking our corridors, but it will feel like living on a rocketship.

We love data! We use data to guide our every decision and to grow and improve our business. We have an incredible team of Data Scientists, our work is highly sought-after, and our impact on the business is tremendous.

Your role within our team-
The size and complexity of the mobile games environment poses great problems to work on for Data lovers. Our ideal candidate should have one hand on a whiteboard writing equations and the other hand on a keyboard writing code, for those problems simply cannot be solved with human intuition. We are hiring outstanding Data Scientist, who will use innovative statistical and machine learning approaches to generate invaluable insights.

Specifically, you’ll:
Lead analytical projects focused on driving customer and revenue growth, working closely with Marketing, Product, and Engineering
Innovate new modeling and machine learning approaches
Mine data and analytics at user level to gain a better understanding of their funnel and engagement behaviors, including impacts of growth, and conversion rate optimization strategies
Use exploratory data analysis techniques to identify meaningful relationships, patterns, or trends from complex structured and unstructured datasets
Develop tools which provide insights and visualization into channel and funnel performance relative to KPIs, projections, and historical performance. Analyze and determine key insights from business drivers, competitive environment, trends, and operating metrics.
Identify impactful business problems and translate them into relevant analyses and actionable insights.
Analyze and assist progress of acquisition performance (attribution, paid/organic, etc...), customer lifetime value, and user conversion funnel data by identifying opportunities to
improve ROI, engagement and retention. Regularly present findings across teams and to senior management to drive optimal decision making.

**Sample project**
Predict User Lifetime Value based on user activities to optimize our media sources
Build an exploration tool for marketers to optimize ROI and marketing performance
Build an AI tool to detect anomalies and spikes in marketing activities such as media spent and product KPIs

**Requirements:**
» knowledge with SQL
» Proficiency in R or Python
» Advantage:
» Experience working with Spark, Hive, Presto
» Ability to communicate complex findings and ideas in plain language
» A passion to mobile games and a data driven approach
» Being able to work in teams towards a shared goal
» Enjoying discovering and solving problems

**Software Engineer (C++)**
The Mobile Infrastructure team is at the heart of PlayStudios development process, and is responsible for creating & maintaining the core of all our games. As part of the team, you will develop cross-platform core systems, our mobile framework (Android and iOS), and our state of the art game engine.

As for the team, we love to architect and create high performance systems, with a passion for solving challenging problems. We are a fast-moving, energetic group, and we are looking for skilled engineers, amazing team players, to grow with us.

**Requirements:**
» BSc in computer science or equivalent (i.e. Mamram/8200)
» Advanced understanding of C++
» Design and programming skills
» A keen analytical mind with strong problem-solving skills
» A team player that enjoys working in a dedicated and energetic group
» Advantages:
» Passion for games of any kind!
» Experience developing for real-time large-scale applications
» Experience with Android or iOS development (Java, ObjC, Swift)
» Experience with server side development

**Software Engineer (C++)**

jobs-il@paypal.com
Hi, It’s nice to meet you. We are Next Insurance.

Our company was founded in 2016 by a team of serial entrepreneurs, Guy Goldstein, Nissim Tapiro and Alon Huri. While building their last business, Guy, Nissim, and Alon saw how hard and frustrating it was to get the right insurance at a decent price. They decided to do something about it, and Next Insurance was born.

Small businesses matter to us. We work hard to support businesses by giving them the best coverage and experience, helping them reach their goals, whatever they may be with a process that’s online, transparent, fast and complete.

Behind our groundbreaking AI-based technology there are hundreds of us. Data scientists, insurance advisors, product managers, designers & more. We are passionate about helping businesses achieve their goals & are committed to serving the needs of business owners.

On this journey, we are looking for unbelievable people to join us, get the option to work with the best technology to learn from the most talents engineers in Israel and really to do something that will change the lives of millions.

Are you up for a meaningful, rewarding, job that will change the face of insurance?
Backend Developer - recent graduate

Our Backend Developer can expect to work with the latest backend technologies and programming languages. We're big fans of server-side Kotlin and produce clean, testable code fast and push it into production several times a day via our CI / CD pipeline. You will work closely with other functional areas in the company - Product, Marketing and our Front-end engineers in order to rapidly iterate on our product and find the best solutions to the challenges we face. You will take ownership of features - from inception through design and coding, eventually for bringing your feature to production at a high level of quality and test coverage.

**Desired Skills and Experience:**

- 4+ years of proven experience in Java Backend development
- Excellent knowledge and understanding of OOP concepts and best practices
- Hands-on development of highly distributed, cloud-based environments, particularly AWS
- Experience working with MySQL, excellent SQL skills.
- B.Sc in computer science or equivalent - must
- Be adaptable and able to quickly learn new technologies and work effectively in a fast paced dynamic environment
- Good interpersonal and communication skills

משרת סטודנט

To get the most from your career you need the very best opportunities!

We're growing fast and looking for brilliant and ambitious final-year student/recent graduate who is eager to learn new technologies, eager to solve unique problems, define company's culture and be a part of our brainstorming, innovative and sharing team, the best team ever!

**Desired Skills and Experience:**

- B.Sc. final year student in Computer Science or a related technical discipline
- Proven experience in Linux/Unix environment - an advantage
- familiarity with OOP /OOD principals & methodologies
- High self-learning capabilities
- Excellent interpersonal communication skills
- Self-driven and independent
- Organized and Methodological approach

We turn everyday transactions into meaningful relationships.
Consumers expect to interact with brands when, where and how they want.
At NCR, we know digital has completely changed how brands compete. To differentiate and win more business, having a digital-first mindset is key—even for physical locations—it's the way to meet consumers in every moment and transform transactions into meaningful interactions.

Shaping the future for 134 years, NCR is the world's enterprise technology leader for restaurants, retailers and banks. The #1 global POS software provider for retail and hospitality, and the #1 provider of multi-vendor ATM software, we create software, hardware and services that run the enterprise from back office to the front end and everything in between for our clients.

Digital first but not digital only, we're positioned to help our clients bridge their digital and physical operations—helping them connect with consumers anytime, anywhere and streamline their business so they can differentiate, compete and win in our evolving digital world.

Headquartered in midtown Atlanta, Ga., NCR has over 34,000 employees in 180 countries. The Israel Site based in Raanana is a leading Retail Innovation and Development center and has over 800 employees.

Mobileye changes the way we drive, from preventing accident to semi and fully autonomous vehicle. If you are excellent, bright, hands-on person with a passion to make a difference come to join the revolution!

Software developer for algorithmic team

What will YOU do?
» Implementation of computer vision and image processing algorithms
» Integration of new features into the company's main algorithmic flow
» Optimization and approximations of algorithms for accelerators
» Large scale design and implementation in C++
» Work and interact with multiple departments in Mobileye

Desired Background
» B.Sc. in Computer Science/ Software Engineering
» At least 2 years of previous C++ development experience - graduates with strong programming abilities will also be considered!
» Knowledge of Matlab is an advantage
» Background in image processing is an advantage
» Ability to work independently and quickly learn new technologies and systems

Algorithm developer

What will YOU do?
Our company has an amazing algorithms department, where you can develop yourself and interact with top experts. The position offers an opportunity to develop and lead solutions of challenging algorithmic problems in the field of computer vision and machine learning.
A developer in the algorithms department will be involved in some or all of the following tasks:
» Prototyping a solution for a complex computer vision problem
» Efficiently implementing a module in C++
» Analyzing massive amounts of data to identify a problem root cause

Desired Background
» Excellent BSc & MSc graduates in Computer Science and similar fields from leading institutions
» Experience in developing signal/image processing and computer vision algorithms, graduates with relevant background from academia also accepted
» Good knowledge of C++
» Knowledge of Matlab/Python - advantage
» Some experience with industrial software development - advantage
» Background in DNN - advantage
» Background in SLAM - advantage for some of the developer positions

Preferred Qualifications
» Ability to quickly learn new technologies
» Proven ability to own and execute complex tasks, under tight schedules and dynamic conditions

jobs@mobileye.com
**Software Engineering Student- סטודנט**

**Job Responsibilities:**
- Develop software, firmware and testing infrastructure for Marvell's next generation industry leading networking devices.
- Work as part of dynamic, open-minded, innovative software team.
- The job requires strong software engineering skills, problem-solving skills, and the ability to come up with creative and original solutions.

**Requirements:**
- B.Sc. Student in Computer Science, Electrical Engineering or Computer Engineering (with honors).
- Experience in C and C++ language programming.
- Experience in scripting language programming (Python, TCL, Perl) - preferred.
- Must have effective interpersonal, teamwork, and communication skills.

---

**Junior Chip Design Engineer- בוגר**

The Switching team develops an industry top technology switches. Marvell Israel is searching for an ASIC chip design engineer to take part in building the chip SoC, including integration of complex design clusters and analog IPs.

The design team develops design integration automation and tools, which enables effective chip level connectivity.

**Responsibilities Includes:**
- Work with PD and ARC teams get the definition for the device, write the uArc and implement the needed design.
- Gain system understanding and knowledge in the switch architecture
- Ability to work with the different IP teams get there deliveries and integration guide line and implement it
- Learning Marvell tools and methodology and use it for chip integration.

**Qualifications:**
- BSc in Electrical Engineering
- Excellent interpersonal and communication skills
- Independent Quality driven – understands the definition, drive high quality and ability for self-check
- Knowledge in Verilog and System Verilog - advantage
- Knowledge in networking – advantage

Kaltura’s mission is to power any video experience. A recognized leader in the Cloud TV, OVP (Online Video Platform), EdVP (Education Video Platform) and EVP (Enterprise Video Platform) markets, Kaltura has emerged as the fastest growing video platform.

Kaltura is deployed globally in thousands of enterprises, media companies, service providers and educational institutions and engages hundreds of millions of viewers at home, at work, and in school. The company is committed to its core values of openness, flexibility, and collaboration, and is the initiator and backer of the world’s leading open-source video management project, which is home to more than 150,000 community members.

Our customers include major service providers and media companies such as Vodafone, HBO, Viacom and Turner, leading enterprises such as MetLife, SAP and Novartis, as well as hundreds of global educational institutions, including Harvard, Columbia, NYU and the University of Michigan.

We like to think of ourselves as a cool, fun and talented group of professionals looking to create cutting-edge technology that is open source and available to all.

Kaltura is a fast-paced environment where standards are high and initiative is always encouraged. We currently have approx. 500 employees across offices in New York, London, Sao Paolo, Singapore, and Tel Aviv, and we are growing rapidly including positions all over the world.

Working at Kaltura comes with many benefits, starting from fun daily breakfast spreads, cool happy hours, and off-site team events, all the way through a flexible work environment that encourages work-life-balance, true openness to internal mobility and relocation, a community involvement team, and even LGBTQ rights, refer-a-friend perks, and a newly launched paternity leave policy.

Junior Software Developer:
A successful software developer at Kaltura is a technologist who possesses a balance of technical depth, creative problem-solving ability, and strong interpersonal skills. You will work with a diverse group of Professional Services team members to understand their pain points and process challenges. Working with your team, you will design robust, predictable, and extensible tools to support their day-to-day work. This is a unique opportunity to work closely with engaged stakeholders and see the impact of your work on a daily basis.

As a software engineer at Kaltura, you will be a part of a large engineering community within both our Core/R&D and Professional Services divisions. This is a multi-faceted and self-determined role. You will have broad control over your technology stack, technical architecture, and deployment methodology.

Minimum Qualifications:
» B.Sc. in Computer Science or similar field from a known institution. GPA above 85.
» Experience/Knowledge in a Linux working environment.
» Experience/Knowledge with distributed systems.
» Experience in multi-threading programming.
» Knowledge in Python and system-level programming - Advantage.
» Passionate about learning new technologies and a great self-learner.
» Excellent verbal and written communications skills - Hebrew & English.

Amazon Rekognition makes it easy to add image and video analysis to your applications using proven, highly scalable, deep learning technology that requires no machine learning expertise to use. With Amazon Rekognition, you can identify objects, people, text, scenes, and activities in images and videos, as well as detect any inappropriate content. Amazon Rekognition also provides highly accurate facial analysis and facial search capabilities that you can use to detect, analyze, and compare faces for a wide variety of user verification, people counting, and public safety use cases.

With Amazon Rekognition Custom Labels, you can identify the objects and scenes in images that are specific to your business needs. For example, you can build a model to classify specific machine parts on your assembly line or to detect unhealthy plants. Amazon Rekognition Custom Labels takes care of the heavy lifting of model development for you, so no machine learning experience is required. You simply need to supply images of objects or scenes you want to identify, and the service handles the rest.

**We are looking for candidates after/during their MSc/PhD, with some Computer-Vision and Machine-Learning background, preferably hands-on experience.**

We seek both full-time and intern positions:

Full-time candidates can be students that have graduated, or are about to graduate, and should have some publication track-record in the latter areas (CVPR, ICLR or similar).

Intern position is time limited (no less than 3-4 months), and is meant for students with some time left in their degree. The goal of an intern is to publish a paper based on her/his work.

Global Field Support Engineers
The Field Support Engineer (FSE) supports Landa’s customers around the world. The primary objective of the FSE is to troubleshoot and resolve any issues with the Landa Nanographic Printing® Press to ensure the customer’s satisfaction, maximizing press usage to the benefit of both the customer and Landa. The FSE will be based in Israel and will travel worldwide to support press installations and ramp-ups, as well as visit customer sites on an ongoing basis as needed.

**REQUIREMENTS**

» Fresh B.Sc. graduate in Mechanical Engineering or Electrical Engineering – mandatory
» Good technical background
» Willing to travel to customer sites worldwide, up to 50% of the time, and work flexible hours – mandatory
» Willingness to relocate in the future – mandatory
» Clear and effective oral and written English communication skills – mandatory
» Experience in the Graphic Arts industry, especially with digital printing technologies and inkjet – advantageous

**For more details and application:**

Regulatory Affairs
Landa seeks a Regulatory Affairs candidate to join its regulations department, reporting to the Regulations Manager. In this role you will address certifications, standards, regulations and test requirements applicable to Landa's consumables in countries where our products are marketed. The job requires collaborating with and supporting internal teams and departments (such as R&D, procurement and logistics, etc.) as well as participating in product and program reviews where you will be serving as a focal point for their requirements.

As part of your scope, you will support certification and regulatory approvals for Landa’s products worldwide, including communicating with external consultants and laboratories for evaluation and testing, and partnering with raw material suppliers to ensure successful and timely product regulatory compliance.
RESPONSIBILITIES
» Assist in maintaining all applicable standards, certifications and regulations
» Be informed and updated on worldwide changing regulations relevant to the company
» Manage and update databases of all substances, compliance checklists, relevant regulatory requirements, and documentation related to worldwide certifications for the company’s new and existing consumables (inks and other solutions)
» Review compliance tests, procedures, and reports to ensure proper completion of test documentation
» Enhance partnerships with the certifying bodies and external laboratories, raw material suppliers and external regulatory consultants
» Support customers’ regulatory requirements by preparing and providing product safety documentation (SDS, technical data sheets etc.) and compliance information
» Participate in programs developed with brands and customers while supporting their applications
» Support the R&D teams with relevant regulatory data

REQUIREMENTS
» M.Sc. in chemistry/chemical engineering/material science
» Previous experience and knowledge in regulatory compliance of the ink printing industry, in relation to cosmetics, pharma, toys, tobacco applications, labels for the food packaging industry, etc. – an advantage
» Experience in a manufacturing environment
» Previous experience in general product safety - an advantage
» Experience in regulatory compliance processes involving regulatory bodies/standards – an advantage
» Fluent in English and Hebrew. Additional languages – an advantage

Foretellix is a unique, technology-based start-up in the field of Autonomous Vehicles (AV). Backed up by top notch investors, it is developing a framework for verification of self-driving cars.

You will join a small group of elite colleagues to make impact on the development of a software platform for autonomous vehicles, and will be proud when your product will enable self-driving cars to go on the roads.

**Student Software Developer**

**What will you do:**
» Develop a revolutionary system for qualifying autonomous vehicles, and be involved in changing the world...
» Work closely with R&D members to identify, define and analyze the SW challenges, design and implement SW solutions.
» Work fully hands-on in coding, debugging, testing and simulations, using object-oriented and aspect-oriented languages, under Linux.
» Take part in development of a new high-level open-source language, its compiler, interpreter and unique sub-systems.
» Take part in technical meetings with colleagues.
» Support other team-members.
» Learn new domains, tools and languages

**Requirements:**
» A Computer-Science student, or similar, in the 5th Semester or higher.
» Some experience in object-oriented software development and programming (OOD-OOP).
» High scores, substantial courses in CS, significant project(s) during your studies
» Self-learner, highly motivated, self-paced.

**Advantages:**
» Previous SW Development experience in IDF
» Proficiency in developing native Linux software using C/C++
» B.Sc. or above in Mechanical Engineering and/or Mathematics and/or Computer Engineering.
» Previous experience in any of the following fields:
  + Automotive industry, and autonomous vehicles in particular.
  + Robotic systems.
  + Game development engines, such as Unity and Unreal.
Junior Software Engineer

What will you do:
» Develop a revolutionary system for qualifying autonomous vehicles, and be involved in changing the world...
» Work closely with your R&D team members to design, implement and test SW solutions.
» Work fully hands-on in coding, debugging, testing and simulations, using object-oriented and aspect-oriented languages, under Linux.
» Take part in development of a new high-level open-source language, its compiler, interpreter and unique sub-systems.
» Tackle and resolve algorithmic SW problems.
» Take part in technical meetings with colleagues, partners and customers; participate in demos.
» Learn new domains, tools and languages.

Requirements:
» B.Sc. in Computer-Science /Software-Engineering with excellent scores from a leading institute.
» Very good orientation to software architecture and algorithm development.
» Self-learner, highly motivated, self-paced.

Advantages:
» Some work-experience in object-oriented software development and programming (OOD-OOP).
» M.Sc. or above in Computer-Science.
» Proficiency in developing native Linux software using C++/Java/Python.
» Previous SW Development experience in IDF.
